Definitions regarding financial instruments for which extension of limit variation may be applied

1. Criteria for selecting financial instruments to be included in the List

- a) **The selection criteria applicable to shares listed on the BVB regulated market, for the first and second tier, which are included in the definition of BET and BET-FI indices**, are as follow: liquidity and other relevant aspects, according to the methodology applicable to those indices.
- b) **Shares admitted to the International Tier**. This selection criteria has been established for ensuring correlation between the price variations recorded in the BVB system for the shares admitted to trading on the International Tier, with the price fluctuations of these securities on the regulated market where they have been admitted to trading for the first time.

2. The periodicity for updating the List

- a) For the shares that are included in the definition of BET and BET-FI indices, the List shall be updated according to the procedure applicable to their definition (half yearly).

If not otherwise stated by a Decision issued by the BVB's General Manager, **any update of the definition of BET and BET-FI indices shall determine the corresponding update of the List.**

- b) For shares admitted to trading on the International Tier, the update of the list shall be realized half yearly, if not otherwise stipulated by the BVB General Manager's Decision.
